

### 2003

In February 2003, Leia suddenly developed cancer in her spleen. There was nothing we could do and she had to be put to sleep just one week later. We are so lucky to have found these two and glad we were able to make Leia's last years so much better than

her first. We miss you Leia! — Luke and his Family from Illinois

We adopted Leia (right), and her brother Luke (left), in April, 2001. They were both very shy around us and incredibly attached to each other. Eventually, they came to accept us as their new family and their individual personalities emerged. While not the goof ball her brother was, Leia was extremely affectionate and playful. When she was very happy, she had the most adorable prance where she would spread her toes and high-step with her front legs. She loved to chase toys and went crazy over anything that squeaked. Leia even liked to watch TV! She was also incredibly devoted to Luke, waiting by the door until he came back from his walks. They would often parade around the house together, holding on to the same toy. Everyday, they gave us something new to laugh about.

Photos: Luke and Leia in their new, loving home.
